

Process and Artifact Compliance Tool

Instrumental for DO-254/DO-178C/DO-278A and Similar Certification Projects

Key Elements of PACT

SecureWeb Management System provides a secure, web-based interface that lets multi-site teams work in a cohesive project environment.

Documents & Reviews Features supply 1000's of pages of documentation templates to get you started, plus a full set of checklists to drive document, data and life cycle phase transition reviews.

Requirements Traceability Feature lets you easily enter & link requirements, with push button traceability matrix generation.

Problem Reporting Feature creates and links problem reports to project data and tracks to closure; easily producing list of Open Problems Reports (OPRs).

Tracking and Managing Project Data (Artifacts) Feature assists with management, baselining, documentation and reviews of all the life cycle data associated with the project.

Exporting & Archiving Feature lets you save data outside the tool as needed and supports full project archiving to meet the needs of ongoing airworthiness requirements.

FEATURES

- Web-based interface (ITAR)
- Requirements management & traceability
- Full set of document templates
- Full set of review checklists
- Document management linked to reviews
- Review management (including Action Item tracking)
- Problem reporting system
- Baselining and CM
- Data Export & Project Archive

BENEFITS

- Enables secure, "anywhere" project access for WW teams
- Provides single repository for customer & certification reviews
- Saves 100's of hours with ready to edit full documentation set
- Minimizes risk by using DER-created review checklists
- Simplifies document tracking & baselining with built in configuration management
- Provides push button traceability
- Tracks Problem Reports and Action Items to closure
- Facilitates analysis and tracking of future software modifications
- Archives or downloads project to any location, anytime you wish
